HSC Organics
Bringing Green to Life

GENERAL INSTRUCTIONS: WITHIN 72 HOURS REFRAIN FROM FUNGICIDES OR OTHER TOXIC CHEMICAL APPLICATIONS

INSTRUCTIONS FOR APPLICATION TO GROUND AND TURF AGITATE IMMEDIATELY BEFORE USE

- When possible tine, spike, or vent before application.
- After application irrigate to affected depth of the soil.
- Mix 1 gallon of HSC Organics with 15 gallons of water.
- Apply at specific dosage and frequency recommended below for specific conditions. Excessive rates or frequent applications will not damage turf or soil.
- Spot treat when necessary to assist during oncoming stress conditions. Unhealthy areas can and should be treated with multiple passes per application to assist in recovery.

- During/after applications continue with regular nutrient programs
- Before application, make sure the tank is cleaned thoroughly and contains no pesticides or herbicides
- Apply early in the morning or late in the evening
- After application, water turf below the depth of affected soil
- Do not apply this product before heavy rains
- Do not store directly in the sun or at high temperatures (Max. 40° C, Max 100 ° F)
- Do not freeze HSC products
- The product expires 10-12 months after the date of manufacture on the container.
- TOXICITY: Not Considered Toxic

Conditions	HSC Application Rate	Frequency
Healthy turf	3-6 gallons/acre (25-50 L/hectare)	every 2 weeks <u>single pass should be sufficient</u>
Minor turf issues	3-6 gallons/acre (25-50 L/hectare)	every week for at least 4 weeks (or until grass is uniformly healthy) and then at least every 2 weeks at half the recommended rate <u>multiple passes as needed on stressed areas</u>
Major turf issues	5-7.5 gallons/acre (47-70 L/hectare)	every week for at least 4 weeks (or until grass is uniformly healthy) and then apply at least every 2 weeks at half the recommended rate <u>multiple passes highly recommended on stressed areas</u>
